

WATER FOR INJECTIONS LAVOISIER, solution for injectable preparation

QUALITATIVE AND QUANTITATIVE COMPOSITION

Water for injectable preparations s.q 100 ml

PHARMACEUTICAL FORM

Solution for injectable preparation

THERAPEUTIC INDICATIONS

Dilution or extemporaneous dissolution of preparations administered by parenteral route.

POSOLOGY AND ADMINISTRATION

Posology and administration method are dependent on the specialties dissolved in water for injectable preparations.

CONTRA-INDICATIONS

Not to be injected alone.

WARNINGS AND PRECAUTIONS FOR USE

Warnings

Water for injectable solutions is a hypotonic solution for parenteral nutrition and should not then be injected alone.

Precautions for use

Admixtures must be made extemporaneously with sterile equipment and strict asepsis. Prior to use, inspect for limpidity of the solution. For each bottle: Prior to use, verify physical integrity of closures and disinfect stopper.

INTERACTIONS WITH OTHER DRUGS AND OTHER FORMS OF INTERACTIONS

Prior to drug dissolution, check its solubility and/or stability in water.

In a mixture of several active ingredients, check whether they are compatible.

PREGNANCY AND LACTATION

Refer to the requirements of active ingredients dissolved in water for injectable preparations.

ADVERSE REACTION

Intravenous injection of water for injectable solutions alone causes hemolysis.
